AUTOMATION

11. Make.com Visual Upload

MY DESK is Metrixx AI's branded private communication network — built on self-hosted Rocket.Chat and accessible exclusively at chat.metrixx.ai. Unlike Slack or Discord, it is not on the public internet. Everything that happens inside MY DESK stays inside Metrixx infrastructure.

Private by Design

No public access, no public indexing. Your conversations and intelligence posts are isolated from the internet entirely.

AI-Powered Rooms

Claude API delivers Gamma Playbook alerts, WATOS signals, and VAULT intelligence directly inside your rooms — no switching apps.

MYCAST Audio Briefs

Daily audio intelligence from the ElevenLabs pipeline is delivered as playable files in the `#mycast-audio` room on a staggered schedule.

Every Platform

Web browser, iOS, Android, Windows, Mac, and Linux desktop apps all connect to `chat.metrixx.ai`. One workspace, any device.

YOUR ROOM ACCESS BY SUBSCRIPTION TIER

On Demand · \$49

4 Market Days. `#general-desk`, `#mixx-signals`, read-only `#mycast-audio`.

Standard · \$195

All rooms for your tier, Claude analytics thread, file upload enabled.

Founder · \$295

All rooms + `#vault-private`, 2nd seat, lifetime rate lock, green badge.

Everything you need to do in the first 10 minutes to get fully operational on MY DESK.

1 Open MY DESK in your browser or app

Browser: go to `https://chat.metrixx.ai`. App: download Rocket.Chat from your device's app store (search "Rocket.Chat"), open it, and enter `chat.metrixx.ai` as the workspace URL when prompted. Tap or click *Connect*.

2 Log in with your Metrixx credentials

Use the email and password from your Metrixx subscription confirmation email. If you haven't received credentials, contact support via `support@metrixx.ai`. On first login, the Setup Wizard walks you through display name, avatar, and preferences.

3 Set your display name and avatar

Click your avatar icon (top of left sidebar) → *Profile*. Enter your preferred display name. Upload an avatar or let it default to your initials. Your username (shown in `@mentions`) cannot be changed after creation — use your preferred handle at signup.

4 Enable Two-Factor Authentication (strongly recommended)

Go to your avatar → *Profile* → *Security* → *Two Factor Authentication*. Enable TOTP with your authenticator app (Google Authenticator, Authy, etc.). This protects your market intelligence access from unauthorized entry.

5 Configure your notifications

Avatar → *Preferences* → *Notifications*. Set Desktop and Mobile alerts to *Mentions* or *Every Mention* for most rooms. For `#mycast-audio`, choose *Nothing* or *Mentions* based on your workflow. Enable push notifications in the mobile app for real-time signal delivery.

6

Bookmark MY DESK and add to your Home Screen

Desktop: bookmark `https://chat.metrixx.ai` or pin the Rocket.Chat desktop app to your taskbar/dock.

Mobile: on iOS, tap Share → *Add to Home Screen*. This makes MY DESK a one-tap launch from any device.

Essential shortcuts: `⌘K` / `Ctrl+K` — Quick room search · `⌘/` — Full shortcut list · `⌘↑` — Edit your last message · `@username` — Mention any member · `Shift+Enter` — New line in message box

MY DESK rooms are organized by function, not by conversation. Each room has a defined purpose. You are automatically added to the rooms included in your subscription tier.

#general-desk	Platform announcements, system status, and welcome messages. Read-mostly — Metrixx posts here, not a chat room.
#gamma-playbook	Live dealer GEX positioning alerts and Gamma Playbook intelligence. Pipeline-posted by Claude — watch for tagged signals.
#mixx-signals	MIXX volatility index outputs and WATOS probability grids (HIGH / MEDIUM / LOW per instrument). Updated pre-market and intraday.
#basis-service	Physical commodity delivery intelligence — grain elevator cash basis, spread analysis, BASIS SERVICE outputs.
#mycast-audio	MYCAST daily audio brief files (ElevenLabs). Staggered release schedule by asset class — Copper 8:05 PM CT through Full Summary 8:05 AM CT.
#vault-private	Founder Member only. Persistent VAULT intelligence archive. Connected to PostgreSQL — every post is permanently stored and searchable.

How to navigate rooms: Press  to open quick search and type any room name. Star a room (hover → : → Favorite) to pin it to the top of your sidebar. Use the search bar inside a room to find any past intelligence post by keyword, date, or mention.

04

A suggested daily routine for getting maximum value from MY DESK's intelligence flow.

1

Pre-market (8 AM CT): Check `#mycast-audio`

The Full MYCAST summary file posts at 8:05 AM CT. Tap to play inline or download for your commute. This brief covers all active instruments and sets the day's key levels and positioning themes.

2

Check `#mixx-signals` and `#gamma-playbook`

Review the overnight WATOS grid and any fresh GEX updates. Star any message you want to reference during the session by tapping the bookmark icon (◆) on the post. Bookmarked messages appear in your personal *Starred Messages* list.

3

Ask the Claude analytics thread

In rooms with an active Claude thread, type your question directly in the message box. Use the *Prompt Catalog* (pinned at the top of each room) for pre-built analytical queries. Standard and Founder Members have full thread access. Example: "What is the current oDTE GEX pivot for ES?"

4

Use threads to keep signal rooms clean

When replying to a pipeline-posted intelligence brief, use *Reply in Thread* (hover the message → reply icon) rather than posting a new message. This keeps the main room feed clean for incoming signals and groups your follow-up questions with the relevant post.

5

Post-session: Archive key signals to VAULT (Founder)

In `#vault-private`, paste or summarize your session's key trade rationale. VAULT is a persistent PostgreSQL-backed archive — everything posted is permanently stored and accessible for historical analysis. Use consistent formatting (date, instrument, bias, key level) for searchability.

MY DESK supports direct file upload of images, screenshots, and PDFs in any room you have write access to. Standard and Founder Members have file upload enabled.

MANUAL UPLOAD — BROWSER AND DESKTOP

1 Click the paperclip icon in the message box

The icon is at the left of the message input bar. Select a file from your computer. Alternatively, drag and drop any image or PDF directly into the room window — a drop zone will appear.

2 Add a description (optional but recommended)

A dialog box will appear before sending. Add a caption in the *File description* field — this becomes the searchable text associated with the file. Use a consistent naming convention: date + instrument + context (e.g., *2026-05-18 ES chart EOD GEX level*).

3 Click Send

Images render inline in the room. PDFs show as a download card with filename and file size. Other members can click to expand or download. File history for each room is accessible via the room's *Files* panel (click the room name → *Files*).

MANUAL UPLOAD — MOBILE (IOS / ANDROID)

1 Tap the + icon in the message bar

This opens the attachment menu. Select *Upload File* to choose from your photo library, camera, or Files app. On iOS, you can also share directly from the Photos app — open a photo, tap Share, select *Rocket.Chat*, choose your room.

2 Select your file and add a caption

Choose the image or PDF. In the preview screen, add a description. Tap *Send*. The file uploads over your active connection (Wi-Fi recommended for PDFs and large images).

File size limit: Maximum upload size on MY DESK is 20 MB per file. If you receive an error on a large PDF, compress it first or split into multiple pages. Contact the admin if you need the limit raised for your workflow.

The official Rocket.Chat YouTube channel maintains a large and growing library of user onboarding and navigation videos. The selections below are verified links from their channel and community. Where third-party creators have produced high-quality tutorials, they are labeled accordingly.

Official channel: Rocket.Chat maintains its full video library at youtube.com/@RocketChat. When browsing for tutorials, search that channel directly for the latest user onboarding, features, and navigation content — their library is updated with each major release.

Rocket.Chat Official YouTube Channel — Full Video Library

youtube.com/channel/UCin9nv7mUjoqrRiwzS5UVQ · also at youtube.com/@RocketChat

Official · Rocket.Chat

The master source for all official Rocket.Chat tutorials, product demos, feature roundups, webinars, and release walkthroughs. Search within the channel by topic: "getting started", "navigation", "file upload", "notifications", "mobile app", etc. Updated with every major platform release.

Tips and Tricks to Get Started with Rocket.Chat

youtube.com/watch?v=aeMgkHpSWr0

Official · Rocket.Chat Support Team

Onboarding webinar with Rocket.Chat Support Lead Tom. Covers workspace navigation, channels, direct messages, file sharing, message formatting, threads, and first-day settings. **Start here — the single best first watch for all MY DESK subscribers.**

Rocket.Chat Full Platform Demo

youtube.com/watch?v=T2v29gK8fP4

Official · Rocket.Chat

Complete platform walkthrough covering UI navigation, channels, DMs, search, notifications, file uploads, and room discovery. Excellent overview of all core features in a single video for users who prefer a comprehensive introduction over step-by-step.

Rocket.Chat – The Leading Communication Hub

youtube.com/watch?v=MW_qsbgt1KQ

Official · Rocket.Chat

Feature overview covering Rocket.Chat's messaging, notifications, mobile app, Omnichannel, and integrations. Helpful context for understanding how MY DESK fits into the broader Rocket.Chat platform ecosystem.

Roadmap Reveal – What's New in Rocket.Chat v6.x

youtube.com/watch?v=6prKzkw_VAI

Official · Rocket.Chat

Product roadmap and new features in the 6.x generation — AI integrations, enhanced file upload and preview, federation, and the redesigned admin panel. Relevant context for MY DESK subscribers using current platform features.

How to Chat Online with Rocket.Chat – Tutorial

youtube.com/watch?v=ntFvRkf7u7c

Community Tutorial

Practical walkthrough of everyday Rocket.Chat usage: sending messages, joining channels, using reactions, uploading files, and managing conversations. Useful supplement to the official docs for visual learners.

Rocket.Chat Video Tutorial Series – 22-Part Playlist

youtube.com/playlist?list=PLYf4Vz9V1ESrjjEfXna9IfYapU4fHgJ8f

Community Playlist · VFX Pipeline

22-video series covering individual Rocket.Chat features in depth: messaging, rooms, admin accounts, channels, notifications, and integrations. Third-party creator (VFX Pipeline) — not from the official Rocket.Chat channel, but widely used for step-by-step feature tutorials.

INTERN & ADMIN TRACK

This section is for UIUC MSFE interns (Jake, Jocelyn, Aras, Zilin) and Metrixx team members who need admin-level access to operate, configure, and maintain the MY DESK workspace. Read through the entire admin track before making any configuration changes.

Admin access is role-gated. Only accounts assigned the global *admin* role can access the Administration panel. Coordinate with Dimitris (DevOps/platform lead) before modifying any workspace-level settings. Changes take effect immediately for all users.

THE ADMIN PANEL — WHERE EVERYTHING LIVES

1 Open the Administration panel

Click the kebab menu (:) in the top-left sidebar → *Administration*. Or navigate directly to `https://chat.metrixx.ai/admin`. You'll see the full admin sidebar with all management sections. Bookmark this URL — you'll use it daily.

2 Learn the admin sidebar structure

The sidebar is organized into three zones: *Info* (workspace stats, version, health), *Manage* (users, rooms, integrations, permissions, custom emoji, sounds), and *Settings* (all workspace config — accounts, general, file upload, email, security). Most of your day-to-day work will be in *Manage*.

3 Check the Workspace dashboard daily

Go to *Administration* → *Workspace*. This shows active users, total messages, storage usage, and the platform version. Check the version number against the Rocket.Chat release page to know if updates are available. Click *Refresh* to pull the latest stats. Download `statistics.json` for weekly platform health reports.

Use keyboard search in admin panels

4

Inside any admin list panel (Users, Rooms, Integrations), use the search bar at the top to filter records. In *Settings*, the global search bar finds any config option by keyword — type "file upload", "SMTP", or "notification" to jump directly to the relevant setting without scrolling through categories.

5

Audit all changes in the Admin Logs

Go to *Administration* → *Reports* → *Logs* to see a real-time server log. Any errors, failed logins, or webhook failures appear here first. For detailed audit logging of admin actions (who changed what setting and when), check *Administration* → *Reports* → *Analytics*. Establish a habit of checking logs weekly during the intern sprint.

The three most common admin tasks during the intern sprint: provisioning new subscriber accounts, assigning them to the correct rooms, and managing the role system.

PROVISIONING A NEW SUBSCRIBER

1

Create the user account

Administration → *Users* → *New User*. Fill in name, email, username, and a temporary password. Check *Require password change* so they set their own on first login. Assign the *user* role (not admin). Click *Save*. The user receives a welcome email if SMTP is configured.

2

Add the user to their subscription tier rooms

Go to *Administration* → *Rooms*. Open each room for their tier (see the room table in Section 3). Click *Members* → *Add Members* and search the username. Repeat for each room. For automation, use the REST API: `POST /api/v1/channels.invite` — this is the approach Jocelyn's pipeline should use for subscription-triggered onboarding.

3

Verify the user's room access on their first login

Ask the new subscriber to confirm they can see their expected rooms after logging in. If a room is missing: *Administration* → *Rooms* → open the room → *Members* → verify the user is listed. Room membership is not retroactive — users only see message history from after they joined.

ROLE STRUCTURE ON MY DESK

admin

Full workspace access. Metrixx team and platform owners only. Can see all rooms, change any setting, manage users and integrations.

moderator	Room-scoped. Assigned per room to senior Metrixx team members. Can pin messages, delete posts, and manage room members within that specific room.
user	Default for all subscribers. Access is gated entirely by room membership — users only see rooms they've been added to. Cannot access admin panel.

To view and edit the full permissions matrix: *Administration* → *Permissions*. Each row is a permission; each column is a role. Toggle the checkboxes to customize what each role can do. Always test permission changes on a non-admin test account before applying to production.

CREATING AND MANAGING ROOMS

1

Create a new private room

Click the **+** icon next to the room list → *New Channel* or *Private Channel*. Set the room name (no spaces — use hyphens). Toggle *Private* on. Toggle *Read Only* on for broadcast-only rooms (e.g., pipeline signal rooms where only the bot posts). Add founding members.

2

Configure room retention policy

In *Administration* → *Rooms*, open a room → *Edit* → scroll to *Retention Policy*. Toggle on *Override Global Retention Policy*. Set a max message age: recommended 365 days for VAULT rooms, 90 days for signal rooms, 30 days for high-volume rooms. This auto-prunes old messages to manage storage on the Coolify deployment.

3

Get a Room ID for API use

In *Administration* → *Rooms*, click a room. The Room ID (`_id`) appears in the URL as a 17-character alphanumeric string (e.g., `hw5DTnhQmxDWnavu`). Copy and store Room IDs for all rooms used in Make.com scenarios or the bot pipeline. The default `#general` room always has ID `GENERAL`.

Rocket.Chat integrations are how the Claude API pipeline, MYCAST delivery, and Make.com automation connect to MY DESK rooms. Every automated post in MY DESK goes through either an Incoming Webhook or the REST API.

CREATE AN INCOMING WEBHOOK (FOR PIPELINE POSTS)

1 Open Integrations

Administration → *Integrations* → *+ New Integration* → *Incoming Webhook*. Give it a descriptive name (e.g., *Gamma Playbook Pipeline*). Enable the *Enabled* toggle. Set the default *Post to Channel* to the target room.

2 Optionally set a username and avatar

Set a *Post as* username (e.g., `metrixx-bot`) and upload a bot avatar. This is what members will see as the sender of all pipeline posts. Keep bot names distinct from human accounts — the convention is `name-bot` or `name-pipeline`.

3 Copy the webhook URL and token

After saving, Rocket.Chat generates a webhook URL in the format:

`https://chat.metrixx.ai/hooks/{webhook-id}/{token}`. Copy this URL in full. This is the endpoint the Claude API pipeline POSTs JSON payloads to. Each room should have its own dedicated webhook — never reuse webhook tokens across rooms.

GENERATE A PERSONAL ACCESS TOKEN (FOR REST API + MAKE.COM)

Bot account setup — do this once

Create a dedicated service account: *Administration* → *Users* → *New User*. Username: `metrixx-bot`. Role: *user* (not admin). Log in as that account → *Avatar* → *Profile* → *Personal Access Tokens* → *Add Token*. Copy

both the token value (`X-Auth-Token`) and the User ID shown (`X-User-Id`). These are only displayed once — store them in your secrets manager immediately. These two values are the required headers for every REST API call, including Make.com file uploads.

Every REST API call requires these two headers:

X-Auth-Token: `{{bot_personal_access_token}}`

X-User-Id: `{{bot_user_id}}`

Example: post a message via REST API

POST `https://chat.metrix.ai/api/v1/chat.postMessage`

Content-Type: `application/json`

```
{
  "roomId": "{{room_id}}",
  "text":   "Signal post from Metrix pipeline"
}
```

Example: upload a file via REST API

POST `https://chat.metrix.ai/api/v1/rooms.upload/{{room_id}}`

Body: `multipart/form-data`

file → `[binary file data]`

msg → `"Caption text here"`

description → `"File description"`

REST API reference: Full endpoint documentation at developer.rocket.chat/reference/api/rest-api. The `rooms.upload` endpoint used in Make.com: [rooms-endpoints/upload-file-to-a-room](https://developer.rocket.chat/reference/api/rest-api/rooms-endpoints/upload-file-to-a-room).

Curated from the Rocket.Chat official channel and verified community resources. These cover workspace administration, user management, room configuration, webhooks, and integrations — the core skills for the intern admin track.

Rocket.Chat Official Channel — Admin & Setup Videos

youtube.com/channel/UCin9nv7mUjoqrRiwrzS5UVQ

Official · Rocket.Chat

Search within this channel for: *"admin setup"*, *"workspace administration"*, *"integrations"*, *"webhooks"*, *"user management"*, and *"permissions"*. The official channel is the most complete and up-to-date source — new admin tutorials are published with each major version release. Start here before the community playlist.

Rocket.Chat Full Platform Demo — Admin View

youtube.com/watch?v=T2v29gK8fP4

Official · Rocket.Chat

Comprehensive walkthrough including the full administration panel: user provisioning, room management, settings configuration, and integrations panel. The admin sections of this video are directly applicable to MY DESK setup. **All interns should watch this in full before starting the admin sprint.**

How to Create a Rocket.Chat Administrator Account

youtube.com/watch?v=qtI3zboWkCY

Community · VFX Pipeline Series #04

Step-by-step walkthrough of creating and configuring an admin account in Rocket.Chat. Part of the VFX Pipeline 22-video tutorial series. Directly applicable to the bot account and service account setup required for

MY DESK's Make.com and pipeline integrations.

Rocket.Chat Tutorial – Setup, Features & Administration

youtube.com/watch?v=5ouPbjUbsjk

Community Tutorial · 2023

In-depth tutorial covering workspace setup, admin panel navigation, channel management, user roles, notifications, and integration configuration. One of the most complete single-video admin references available — directly relevant to the Coolify/self-hosted configuration used by MY DESK.

OFFICIAL DOCUMENTATION – ADMIN REFERENCE

Administrator's Guide – Official Docs

docs.rocket.chat/docs/workspace-administration

Official Docs

Complete admin reference: workspace settings, SMTP, user management, role and permissions matrix, analytics, compliance, integrations, and the full settings catalog. The primary written reference for all MY DESK admin tasks.

Roles and Permissions – Official Docs

docs.rocket.chat/docs/roles-in-rocketchat

Official Docs

Full role taxonomy — global vs. room-scope roles, how to create custom roles, 2FA enforcement per role, and the complete permissions matrix. Required reading before modifying any MY DESK role configurations.

Manage Users – Official Docs

docs.rocket.chat/docs/manage-workspace-users

Official Docs

User administration: create, edit, deactivate, and delete accounts. Reset passwords, manage E2EE keys, assign roles, and use the seat indicator to monitor subscription capacity. Direct reference for subscriber provisioning

workflows.

REST API — rooms.upload Endpoint

developer.rocket.chat → rooms-endpoints → upload-file-to-a-room

[Developer Docs](#)

The core upload API endpoint used by Make.com and the pipeline: **POST**
/api/v1/rooms.upload/{roomId}. Required headers, multipart/form-data fields, and full response schema. Jocelyn Wu's pipeline sprint reference.

AUTOMATION TRACK

11

Route phone photos, screenshots, and PDFs directly into a MY DESK room — automatically, with no manual upload. The scenario watches a Google Drive folder or Gmail inbox and posts files to Rocket.Chat via the REST API.

What this solves: Drop a chart screenshot from your phone into a shared Drive folder and it appears instantly in `#gamma-playbook` — no logging into MY DESK, no file transfer step. Ideal for members monitoring markets on mobile.

PREREQUISITES — COLLECT THESE VALUES FIRST

X-Auth-Token	Personal Access Token from the bot account (see Section 9)
X-User-Id	User ID of the bot account
Room ID	Target room _id from Admin → Rooms (e.g., <code>hw5DThnhQmxDWnavu</code>)
Workspace URL	<code>https://chat.metrixx.ai</code>

SCENARIO A — GOOGLE DRIVE → MY DESK

TRIGGER Google Drive — Watch Files in a Folder

Connect Google account. Set *Folder* to a dedicated upload folder (e.g., `MY DESK Uploads`). Set *Watch* to *New Files Only*. Polling: every 5 minutes. On mobile, share any photo directly to this folder from iOS/Android Photos app — the scenario fires automatically.

MODULE 2 Google Drive — Download a File

Map *File ID* to `{{1.id}}` from the trigger. This fetches the binary file content so it can be forwarded to Rocket.Chat. Output contains binary data, filename, and MIME type.

MODULE 3 HTTP — Make a Request

Configure the HTTP module as follows:

```
Method:      POST
URL:         https://chat.metrix.ai/api/v1/rooms.upload/{{ROOM_ID}}

Headers:
  X-Auth-Token:  {{bot_token}}
  X-User-Id:     {{bot_user_id}}

Body Type: multipart/form-data

Fields:
  file           → [Binary output from Module 2]
  filename       → {{1.name}}
  msg            → 📷 {{1.name}} — via MY DESK
  description    → Uploaded from Drive: {{1.name}}
```

Customize the `msg` field per scenario to add date, source, or instrument context. This becomes the visible caption in the room.

OPTIONAL Router — Images vs PDFs to Different Rooms

Add a Router after Module 1. Route 1: `{{1.mimeType}} contains image/` → chart room. Route 2: `{{1.mimeType}} contains application/pdf` → vault room. Each route gets its own HTTP module with the corresponding Room ID.

SCENARIO B — GMAIL ATTACHMENT → MY DESK

TRIGGER Gmail — Watch Emails (with attachments)

Connect the uploads inbox (e.g., `uploads@metrixx.ai`). Filter: *Has Attachment = true*. Optional subject filter: "MY DESK" to prevent false triggers from other emails. Polling: every 5–15 minutes depending on Make.com plan.

MODULE 2 Gmail — Get Attachments (Iterator)

Add an Iterator to loop through all attachments. Map *Message ID* from trigger. Each iteration yields one binary attachment bundle. Connect to the HTTP module. The message caption can pull the email subject: `{{2.filename}} - from: {{1.subject}}`.

MODULE 3 HTTP — Make a Request (same config as Scenario A)

Same URL, headers, and body structure. Map `file` to the attachment binary from the iterator output.

SCENARIO C — IOS SHORTCUT (ONE-TAP FROM CAMERA ROLL)

1

Shortcuts app → New Shortcut → *Get Latest Photos* (count: 1)

Or use *Select Photos* for a picker. This is the input — the most recent photo or one you choose.

2

Add *Get Contents of URL* action

URL: `https://chat.metrixx.ai/api/v1/rooms.upload/{ROOM_ID}`. Method: POST. Headers: add `X-Auth-Token` and `X-User-Id`. Body: Form — field `file` mapped to the photo, field `msg` with your caption. Tap Done.

3

Add to Home Screen — one tap per room

Share → Add to Home Screen. Name it *Send to MY DESK*. Create one shortcut per frequently-used room with different Room IDs. One tap uploads your last photo directly to the target room — no app required.

Checklist if uploads fail: (1) Nginx config: `client_max_body_size 20M;` · (2) Admin → Settings → File Upload → max size matches · (3) Make.com HTTP module timeout $\geq 30s$ · (4) Bot account token is valid and not expired · (5) Room ID is the `_id` value, not the room name.

Metrixx AI · MY DESK Onboarding Guide · chat.metrixx.ai
